

8050 Mid-Sized Sound Chamber

The 8050 Mid-Sized Sound Chamber is available for the FONIX 8000 Hearing Aid Test System.

It is compact and attractive yet large enough to provide good sound isolation with minimal sound reflections. The speaker is mounted vertically at the back of the chamber, making it easy to position

the hearing aid with respect to the speaker. All cables required for normal testing with the

8000 Hearing Aid Test System including the microphone, battery pill, and a Hi-Pro pass-through are connected inside the chamber, so there are no leaks in the seals when the lid is closed.

Exterior Size: 11.5"W x 13.5"D x 9.2"H

Weight: 21.8 lbs

Test Area Size: 5"W x 6"D x 1.5"H

Ambient Noise Isolation: 45 dB at 1 kHz
